Project Abstract

This purpose of this research project was to develop technology to detect all underground utilities, including plastic pipelines and provide high quality location information. The solution must be non-invasive for detecting, mapping and inspecting steel and plastic pipelines. The system combines measurements from ultra-wideband radar and electromagnetic induction arrays with precise positioning and advanced image processing.

PHMSA Funding: \$469,060

NET Improvement

Witten's patented technology is the first commercial system capable of producing highly accurate, three-dimensional maps and images efficiently and noninvasively (without digging) in conditions as much as ten feet underground and based on rapid computer analysis of radar images.

US Patent under DOT Contract:

6,525,539; 6,766,253; and 6,667,709

Vehicle mounted or smaller hand walked system by operator for rural or urban deployment.

Commercial Partner

This technology was offered by Witten Technologies Inc. of Jacksonville, FL until 2010. No current company information is available.
